Languages

Support of many languages was build into player design. We think this opportunity required for modern player. You can change language by means of two **flashvar** variables (more about flashvars [on Adobe webpage](#)) – it's **languagepath** and **language**.

Variable named languagepath indicate a folder where language located, and variable named language indicate a language code. For example: if **languagepath=assets/languages** and **language=en**, then actual path to file with language will be **assets/languages/en.xml**.

Initial data:

name	value
player swf	cinemaplayer.swf
video file	trailer.flv
html page	index.html
thumbnail	thumb.jpg
host	www.example.com
languagepath	assets/languages
language	ua
swf object	swfobject/swfobject.js

Important! For purpose your flash player to load pictures from your domain it's necessary to place **crossdomain.xml** file in the root of your server (more about [Cross-domain policy file specification](#))

How to integrate player by means of swf object [read in article](#).

Code part with flashvars for swf-object:

```
var flashvars = {  
    'languagepath': 'assets/languages',  
    'language' : 'ua',  
    'content' : 'trailer.flv',  
    'poster' : 'thumb.jpg',  
};
```

Working example you can [watch online](#).

Language default variables

Since file with language is an usual XML, so it's simple enough to add new language.

Create new xml file with language, for example ua.xml, in **languagepath** folder (in this case **assets/languages**).

Example of easily localization of few buttons:

```
<?xml version="1.0" encoding="UTF-8"?>
<language>
    <playico>go go go</playico>
    <copylink>The embed code in your clipboard</copylink>
</language>
```

There is next list of elements:

Language XML Description		
element	default value	description
Embed Player HTML Code		
embedico	Copy Embed Code	button hint
copyembed	the embed code has been copied to clipboard	bubble message
Copy Video Page Link		
linkico	Copy Link	button hint
copylink	the link has been copied to clipboard	bubble message
Playback Controls		
playico	Play	button hint
pauseico	Pause	button hint

Language XML Description		
stopico	Stop	button hint
Sound Button		
soundico	Sound	button hint
soundonico	Sound ON	button hint
Fullscreen Button		
fullscreenico	Fullscreen	button hint
fullscreenoffico	Exit Fullscreen	button hint
Next / Previous Content Buttons		
nextico	Next	button hint
previousico	Previous	button hint
Settings Panel		
settingsico	Settings	button hint
settingshideico	Hide Settings	button hint
Submenu		
menuico	Open Submenu	button hint
menuhideico	Close Submenu	button hint
Podcast Button		
podcastico	Podcast	button hint
podcasthideico	Hide Podcast	button hint
Mark Button		
markico	Add Mark	button hint
Chart Button		
chartico	Rating	button hint
Snapshot Button		
snapshotico	Snapshot	button hint
Zoom Button		
zoomico	Zoom	button hint
Timeline Button		
timelineico	Timeline	button hint
Errors Messages		

Language XML Description		
mediaerror	Media Not Found	bubble message
connecterror	Connect Failed	bubble message couldn't connect to RTMR server
secureerror	Security Error	bubble message
playerror	Media Play Error	bubble message some media error occurred
nosupportedtrackfound	Error: No Supported Track Found	bubble message
filestructureinvalid	Error: File Structure Invalid	bubble message
Listing Viewer		
listingico	Show Listing	button hint
listinghideico	Hide Listing	button hint
listingloadfailed	Listing XML Load Failed	button hint
Sequence Play Module		
sequenceplayico	Play Sequence	button hint
sequencepauseico	Pause Sequence	button hint
sequenceonico	Play Sequence ON	context menu button label
sequenceoffico	Play Sequence OFF	context menu button label
Chapters Viewer		
partstico	Chapters	button hint
partsshowico	Show Chapters	button hint
partshideico	Hide Chapters	button hint
nextpartico	Next Chapter	button hint
previouspartico	Previous Chapter	button hint
partsuntitled	Untitled	Untitled Chapter Label
